

We produce our Navurban Earth™ samples by cutting standard 2.4m x 1.2m pressed boards into A4, A5, and 135 x 95 mm formats. This approach ensures that the samples you receive accurately reflect the texture and scale of the print as it will appear on finished joinery.

Please note that, as these samples represent only a small section of a full panel, variations in colour and structure across the entire sheet can be expected.

The images below provide a visual reference of how much of a full panel is captured within an A4 sample.

If you would like to view full-sized panels across our complete product range, you can book an appointment at our Alexandria showroom.
